PROGRAM BLUEPRINT & APP SPECIFICATION ARCHIVE

3-Day Full-Body Lean Muscle Workout Plan

Complete conversation record, user profile parameters, exercise database, coaching cues, and progression logic for application development.

1. User Profile, Constraints & Equipment Inventory

This specification captures all baseline requirements, user questionnaire selections, and hardware parameters established during the planning session. When building the companion workout application, these parameters serve as the user onboarding configuration and equipment filter rules.

Parameter Category	User Selection / Input	Programming & App Logic Impact
Primary Goal	Develop Lean Muscle (Hypertrophy)	Focus on mechanical tension, controlled eccentrics, and minimal rest periods via antagonist supersets.
Experience Level	Intermediate	Comfortable with fundamental barbell and dumbbell biomechanics; ready for unilateral loading, 1.5-rep schemes, and pause reps.
Weekly Training Split	3x Full Body + 1x Occasional Active Recovery	Every major muscle group is stimulated 3 times per week (Days A, B, and C), with an optional 4th day dedicated to brisk Zone 2 walking.
Session Duration	20–25 Minutes (~22 mins total)	Includes a 2-minute dynamic warm-up followed by 3 dense workout blocks utilizing antagonist pairings to halve rest time.
Dumbbell Inventory	5 kg, 7.5 kg, 10 kg, 15 kg pairs	30 kg maximum combined dumbbell load; primary driver for bilateral presses, rows, RDLs, and high-intensity unilateral leg work.
Barbell Inventory	10 kg & 15 kg fixed-weight barbell rods (no extra weight plates)	Ideal for strict standing curls, skull crushers, upright rows, bent-over rows, and dynamic warm-ups.
Bench Type	Incline / Adjustable Bench (Flat, 30°, 45°, 75–80°)	Unlocks incline upper-chest pressing, chest-supported rows, seated overhead pressing, and long-head stretch incline bicep curls.

> **Core Programming Architecture (Antagonist Supersets & Unilateral Loading):** Because the heaviest dumbbells are 15 kg (30 kg total load) and the barbells are fixed at 10 kg and 15 kg, standard bilateral squats quickly become too light for an intermediate lifter. This program solves equipment ceiling limits by utilizing single-leg exercises (Bulgarian split squats), tempo manipulation (3-second lowering phases, 1.5-rep squats, 1-second bottom pauses), and zero-setup antagonist supersets where one muscle group works while the opposing muscle group recovers.

2. Complete Exercise Database Overview

Each training day consists of 3 structured blocks (~20 minutes of working sets after a 2-minute dynamic warm-up). The table below provides the structured schema for all three full-body sessions.

Session	Block	Exercise / Superset Pairing	Sets & Reps	Rest	Equipment & Setup
Day 1: Full Body A	Block 1	Bulgarian Split Squat (Unilateral Focus)	3 × 10–12 / leg	60s	10 or 15 kg DBs + Flat Bench
Day 1: Full Body A	Block 2 (Superset)	2A. Incline Dumbbell Press 2B. Chest-Supported Dumbbell Row	3 × 10–12 each	60s	15 kg DBs + 30° Incline Bench
Day 1: Full Body A	Block 3 (Superset)	3A. Standing Barbell Bicep Curl 3B. Overhead Dumbbell Tricep Extension	3 × 12–15 each	45s	15 kg Barbell + Single 10/15 kg DB
Day 2: Full Body B	Block 1	Tempo Dumbbell Romanian Deadlift (RDL)	4 × 12	60s	15 kg DBs (3s down, 1s pause)
Day 2: Full Body B	Block 2 (Superset)	2A. Seated Dumbbell Shoulder Press 2B. One-Arm Tripod Dumbbell Row	3 × 10–12 each	60s	10/15 kg DBs + 75–80° / Flat Bench
Day 2: Full Body B	Block 3 (Superset)	3A. Flat Barbell Skull Crusher 3B. Incline Dumbbell Bicep Curl	3 × 12–15 each	45s	10/15 kg Barbell + 7.5/10 kg DBs (45° Bench)
Day 3: Full Body C	Block 1 (Superset)	1A. 1.5-Rep Dumbbell Squat 1B. Weighted Bench Hip Thrust	3 × 12 each	60s	15 kg DBs + Flat Bench
Day 3: Full Body C	Block 2 (Superset)	2A. Pause Flat Dumbbell Bench Press 2B. Bent-Over Barbell Row	3 × 12–15 each	60s	15 kg DBs (Flat Bench) + 15 kg Barbell
Day 3: Full Body C	Block 3 (Superset)	3A. Dumbbell Lateral Raise 3B. Wide-Grip Barbell Upright Row	3 × 15 each	45s	5 or 7.5 kg DBs + 10 kg Barbell

3. Detailed Workout Execution & Coaching Cues

The following specifications contain the exact movement execution instructions and coach tips generated for each workout card. In a workout app, these map directly to the exercise instruction modal and real-time audio/text prompts.

Day 1: Full Body A — Quad & Upper Chest Emphasis (~22 Minutes)

> **Block 1: Bulgarian Split Squat | 3 Sets × 10–12 Reps per Leg | 60s Rest | Equipment: 10 kg or 15 kg Dumbbells, Flat Bench**
>
> **Execution:** Elevate your rear foot on the flat bench and hold 10 kg or 15 kg dumbbells at your sides. Lower your back knee toward the floor with a slight forward torso lean to load both the quads and glutes, then drive firmly through your front heel to stand.
>
> **Coach Tip (Maximize Tension):** Because 15 kg dumbbells can feel light on two-legged squats, loading a single leg makes 30 kg feel like 60+ kg on a barbell.

> **Block 2 Superset: Incline Press & Chest-Supported Row | 3 Sets × 10–12 Reps Each | 60s Rest | Equipment: 15 kg Dumbbells, 30° Incline Bench**
>
> **Execution:** Set your bench to a 30-degree incline. Press the 15 kg dumbbells overhead with a 2-second lowering phase. Immediately flip over, rest your chest against the incline pad, and row the 15 kg dumbbells toward your hips to target your upper back and lats.
>
> **Coach Tip (Superset Efficiency):** Using the exact same 30-degree bench angle and 15 kg dumbbells for both moves eliminates equipment setup time between exercises.

> **Block 3 Superset: Barbell Curl & Overhead Tricep Extension | 3 Sets × 12–15 Reps Each | 45s Rest | Equipment: 15 kg Barbell Rod, Single 10 kg or 15 kg Dumbbell**
>
> **Execution:** Grab your 15 kg barbell rod for strict standing bicep curls, keeping elbows pinned to your ribs. Immediately transition to holding a single 10 kg or 15 kg dumbbell vertically overhead with both hands, lowering it behind your head to stretch the triceps.
>
> **Coach Tip (Arm Pump):** Squeeze at the top of each curl for 1 full second to maximize bicep recruitment with a fixed-weight barbell.

Day 2: Full Body B — Hamstring, Overhead & Back Emphasis (~22 Minutes)

> **Block 1: Tempo Dumbbell Romanian Deadlift | 4 Sets × 12 Reps | 60s Rest | Equipment: 15 kg Dumbbells**
>
> **Execution:** Hold the 15 kg dumbbells in front of your thighs. Hinge your hips straight back while keeping a soft bend in your knees and the weights grazing your shins. Take a full 3 seconds to lower, pause 1 second at mid-shin stretch, and snap your hips forward.
>
> **Coach Tip (B-Stance Upgrade):** Once 15 kg pairs feel easy for 12 reps, stagger one foot slightly behind the other on its toes to shift 80% of the load onto one hamstring.

Block 2 Superset: Seated Shoulder Press & One-Arm Row | 3 Sets × 10–12 Reps Each | 60s Rest | Equipment: 10 kg or 15 kg Dumbbells, Adjustable Bench

Execution: Set your bench upright (75–80 degrees) and press the 10 kg or 15 kg dumbbells overhead. Immediately drop the bench flat, place one knee and hand on the pad, and row a 15 kg dumbbell hard toward your hip crease for 12 reps per side.

Coach Tip (Shoulder Safety): Keep your elbows angled slightly forward (around 45 degrees in front of your torso) rather than flared straight out to protect your rotator cuffs.

Block 3 Superset: Barbell Skull Crusher & Incline Curl | 3 Sets × 12–15 Reps Each | 45s Rest | Equipment: 10 kg or 15 kg Barbell Rod, 7.5 kg or 10 kg Dumbbells, Bench

Execution: Lie flat on your bench with the 10 kg or 15 kg barbell rod and lower it toward your forehead by bending only at the elbows. Next, set the bench to 45 degrees and perform strict bicep curls with 7.5 kg or 10 kg dumbbells with your arms hanging behind your torso.

Coach Tip (Long-Head Stretch): Letting your arms hang behind your torso on an incline bench places maximum stretch on the biceps, triggering strong muscle growth with lighter weights.

Day 3: Full Body C — Glute, Flat Chest & Side Delt Emphasis (~22 Minutes)

Block 1 Superset: 1.5-Rep Dumbbell Squat & Hip Thrust | 3 Sets × 12 Reps Each | 60s Rest | Equipment: 15 kg Dumbbells, Flat Bench

Execution: Hold two 15 kg dumbbells at your shoulders (or one 15 kg goblet-style). Squat all the way down, come halfway up, return to the bottom, and stand tall (that counts as 1 rep). Pair with upper-back-on-bench hip thrusts holding a 15 kg dumbbell across your hips.

Coach Tip (1.5 Rep Technique): Adding the half-rep at the bottom doubles the time your quads spend in their hardest range of motion, making 15 kg dumbbells burn intensely.

Block 2 Superset: Flat Dumbbell Press & Barbell Row | 3 Sets × 12–15 Reps Each | 60s Rest | Equipment: 15 kg Dumbbells, 15 kg Barbell Rod, Flat Bench

Execution: Lie on your flat bench and press the 15 kg dumbbells, pausing for 1 full second an inch above your chest on every rep. Stand up immediately, hinge forward to a 45-degree torso angle, and row your 15 kg barbell rod into your lower sternum for 15 strict reps.

Coach Tip (Pause Reps): Eliminating the bounce at the bottom of the bench press forces your chest fibers to generate pure concentric force.

Block 3 Superset: Lateral Raise & Barbell Upright Row | 3 Sets × 15 Reps Each | 45s Rest | Equipment: 5 kg or 7.5 kg Dumbbells, 10 kg Barbell Rod

Execution: Raise the 5 kg or 7.5 kg dumbbells out to your sides with a slight forward lean until elbows reach shoulder height. Follow immediately with a wide-grip upright row using the 10 kg barbell rod, pulling it up to lower-chest height to cap off your side delts and traps.

Coach Tip (Light Weight Precision): Your 5 kg and 7.5 kg dumbbells are the stars here—avoid swinging your hips and lead with your elbows so the side delts do 100% of the work.

4. Weekly Schedule & Calendar Integration

The recurring weekly training calendar spaces the three full-body resistance sessions with at least 48 hours of recovery between lifting days, integrating the optional 4th day walk on Saturday.

Day of Week	Scheduled Session	Duration	Primary Focus & Implementation Notes
Monday	Day 1: Full Body A	~22 mins	Quad & Upper Chest emphasis; 2-min warm-up + 3 blocks.
Tuesday	Rest or Light Mobility	—	Central nervous system and muscular recovery.
Wednesday	Day 2: Full Body B	~22 mins	Hamstring, Overhead & Back emphasis; 2-min warm-up + 3 blocks.
Thursday	Rest	—	Full recovery between Workout B and Workout C.
Friday	Day 3: Full Body C	~22 mins	Glute, Flat Chest & Side Delt emphasis; 2-min warm-up + 3 blocks.
Saturday	Day 4: Active Recovery	30–40 mins	Brisk Zone 2 walk (conversational pace). Optional 5-min core finisher afterward: 2 sets of planks and bench leg raises.
Sunday	Full Rest	—	Complete rest ahead of Monday's Full Body A session.

5. Progressive Overload Rules for Fixed Equipment (App Logic)

Because the available weights cap at 15 kg dumbbells and 10 kg / 15 kg fixed barbells, the application should guide progression using four systematic levers rather than relying solely on adding weight plates:

Progression Lever	Execution Rule	Recommended App Tracking Feature
1. Rep Progression First	Work from the bottom of the target rep range (10 reps) to the top (15 reps) across all sets before jumping from 5 kg → 7.5 kg → 10 kg → 15 kg.	Auto-increment target reps by +1 per session until all sets hit the upper threshold, then prompt a weight jump.
2. Slow the Eccentric	Once 15 reps with the 15 kg dumbbells are achieved, slow the lowering phase from 2 seconds to 3–4 seconds on presses, squats, and RDLs.	Include a customizable cadence/tempo metronome (e.g., 3-1-1-0 or 4-1-1-0) on the active set screen.
3. 1-Second Bottom Pause	Introduce a strict 1-second isometric pause in the stretched position (bottom of split squats, incline curls, or dumbbell presses) to eliminate momentum.	Add a "Paused Rep Mode" toggle to log sets performed with a strict bottom hold once weight is maxed out.
4. Rest Interval Compression	Reduce rest periods between supersets from 60 seconds down to 45 seconds to increase metabolic density inside the 20-minute training window.	Configure an automated countdown rest timer that adjusts from 60s to 45s as a progression milestone.
